NPN at a Glance

NPN provides advanced, web-based software applications and services to third-party or independent medical billers

Building on the knowledge and relationship between a medical provider and biller and leveraging the power of "Cloud Computing" we can simplify the complex process of medical record keeping, coding, billing, collection and ordering to improve a medical provider's efficiency and financial results. We are passionate about offering the highest quality technology and services to independent medical billers who share our commitment to quality service.

Provider Net EHR Version 11.0 is a CCHIT Certified 2011 Ambulatory EHR with a Five Star Usability Rating and ONC-ATCB certified as well as given Surescripts® Gold Solution Provider status. Provider Net PM has also been readily adopted in the medical billing community. Our applications are fully integrated and HIPPA compliant and available through the internet with a monthly subscription and are also available in a mobile device format.

For Medical Providers
Seeking to:

Improve front desk efficiency

NPN offers real-time, electronic health insurance eligibility verification, authorizations and coverage details.

Easy-to-use medical office electronic appointment scheduler

Simplify and lower technology costs and complexity

NPN's applications are continuously updated to reflect changing payer rules and other enhancements with no disruption.

Medical offices do not need expensive hardware, just an internet connection and common browsers.

Works with standard or touch screen desktops, notebooks, tablets and mobile devices.

Information is backed, secure and is always accessible through HIPPA compliant connections.

For Medical Providers
Seeking to:

Improve collections and cashflow

Integrated electronic information reduces billing errors.

Customized *electronic superbills* can be created and submitted with a few clicks.

All claims are checked for accuracy before submission.

Claim status is available online in real time.

Manage denial appeals efficiently with easy access to all documents stored electronically.

Be compensated fairly and bill accurately

Accurate billing increases revenues, cash flow, reduces denials and increases patient satisfaction.

Be positioned for the future of EHR and "cloud computing"

Web-based applications offer many advantages

NPN's application allows providers to create, scan and import documents and images of many file types which are easy to store, secure and retrieve.

Go paperless

NPN can customize electronic versions of patient encounter forms including superbills in use by a provider.

This eliminates the need for faxing, scanning, filing and the data entry errors that inevitably result from paper processing.

If paper or dictated information is preferred such records are stored electronically in the patient record for easy access.

For Medical Providers Seeking to:

View information about the practice

NPN's applications can produce tables and graphic displays of critical financial and operating performance data

Cash flow can be accurately projected and maximized.

Improve communication between providers, assistants, billers and management

NPN's systems allow easy creation, viewing and retrieval of information as well as messaging between parties

Medical office staff have different levels of authority and access

Participants can work remotely: from another location or home as if they were at the next desk or office

Outsourced medical billing and collection activity can be made much more efficient and accurate reducing its cost
